

## Data Prioritization Techniques

Technique	Description	Pros
Multi-Voting	<ul style="list-style-type: none"> <li>• A series of voting rounds to help narrow focus &amp; establish priorities</li> <li>• Different than “regular” voting</li> <li>• Allows popular priorities to “win out”</li> </ul>	<ul style="list-style-type: none"> <li>• Helps to narrow scope</li> <li>• Finds common topics/issues of interest</li> </ul>
Strategy Grids	<ul style="list-style-type: none"> <li>• Pairs criteria in a 4-quadrant grid</li> <li>• Categorizes projects with established criteria using High and Low pairings</li> <li>• Assigns values to ideas</li> <li>• Establishes the highest priority areas</li> </ul>	<ul style="list-style-type: none"> <li>• Identifies issues/solutions that will yield the greatest results</li> <li>• Helps achieve maximum results with limited resources</li> <li>• Focuses the plan of action</li> <li>• Narrows the scope from brainstorming lots of options to a more singular plan of action</li> </ul>
Nominal Group	<ul style="list-style-type: none"> <li>• Uses round-robin idea sharing followed by ranked choice voting to establish a group’s top priorities</li> <li>• Produces lots of ideas quickly to target your area of focus</li> </ul>	<ul style="list-style-type: none"> <li>• Guides the early stages of prioritization</li> <li>• Generates many ideas quickly</li> <li>• Pairs well with the Multi-Voting Technique</li> <li>• Uses a democratic process with input from all levels of the agency</li> </ul>
Hanlon Method	<ul style="list-style-type: none"> <li>• Determines top priority by rating (1) the size and magnitude of the problem and (2) the effectiveness of proposed interventions</li> <li>• After rating, the PEARL<sup>1</sup> test is applied, and priority scores are calculated</li> <li>• Results ranked based on the scores</li> </ul>	<ul style="list-style-type: none"> <li>• Utilizes a data-oriented approach</li> <li>• Is replicable - Two different people using the same data should come to the same results</li> <li>• Uses pre-defined definitions and criteria</li> <li>• Creates visual documentation of its process that can be reviewed</li> </ul>
Prioritization Matrix	<ul style="list-style-type: none"> <li>• Rates each issue on how well it meets organizational criteria</li> <li>• Each criterion is weighted based on its level of importance</li> <li>• A final priority score is calculated for each item</li> </ul>	<ul style="list-style-type: none"> <li>• Helps narrow the focus if you have a large number of criteria or if only a single problem can be addressed</li> <li>• Provides visual documentation of its process that can be reviewed</li> </ul>

<sup>1</sup> PEARL test: **Propriety** – is the intervention suitable for the problem; **Economics** – Is it economical to address the problem, what are the consequences if the issue is not addressed; **Acceptability** – Is the intervention wanted, will it be accepted by the community; **Resources** – What funding is available for the intervention; **Legality** – Can the intervention legally be implemented.
