Central East PTTC Webinar

Identifying and Responding to Emerging Drug Trends Part 1: What the Data Shows

The Central East PTTC is housed at the Danya Institute in Silver Spring, MD

Renata Henry
Executive Director

Deborah Nixon Hughes
Project Director

Central East (HHS Region 3)

PTTC

Each TTC Network includes 13 centers.*

Network Coordinating Office

National American Indian and Alaska Native Center

National Hispanic and Latino Center

10 Regional Centers (aligned with HHS regions)

**The ATTC Network also includes 4 international HIV centers funded by the President's Emergency Plan for AIDS Relief.*

Central East Region

HHS REGION 3

The use of affirming language inspires hope.

LANGUAGE MATTERS.

Words have power.

PEOPLE FIRST.

The PTTC Network uses affirming language to promote the application of evidence-based and culturally informed practices.

PTTC Mission

To Strengthen **the Capacity of the Workforce to Deliver Evidence-Based Prevention Strategies and Facilitate Opportunities for Preventionists to Pursue New Collaboration Opportunities, which include Developing Prevention Partnerships and Alliances**

Central East PTTC Specialty Area

Engaging and Collaborating with Primary Care Providers for Substance Use Prevention

Eligibility

Behavioral health and health care providers, consumers, families, state and local public health systems and other stakeholders

Consistent with
Regional, State
and Local
Needs

No cost

Data Driven

EBPs provided
by Subject
Matter Experts

PTTC Focus Areas

- Opioid/harm reduction strategies
- Suicide prevention and substance use overdoses
- Youth vaping/tobacco
- Youth alcohol and suicide
- Health equity and the elimination of disparities
- Trauma
- Workforce leadership development series-
strategic planning/SPF; data-informed decision-
making; environmental strategies

Presenter

Emily Patton
Presenter

Learning Objectives

- Explain the importance of understanding emerging drug trends
- Explore what is known about the impact of COVID-19 on use trends
- Summarize the latest emerging trend data for the region and the nation
- Highlight the latest information on the causes behind these trends

Importance of Understanding Emerging Trends

- Vital aspect of a Needs Assessment
- Informs us if substance use is increasing disproportionately among various populations
 - And by age group, gender, or other demographics
- Informs us if specific substances are becoming more or less prevalent
- Today we're focusing mostly on overall prevalences
 - But that's only a starting point for a complete Needs Assessment

Importance of Understanding Emerging Trends

- Enables us to adjust our planning and implement new/different interventions
- By responding more rapidly to emerging trends, we can alter the scope, severity, and duration of potential epidemics
 - This can require expanding collaboration with a variety of stakeholders
 - And keeping informed of the latest research into evidence-based prevention interventions

The Three Stages of an Epidemic (Winkler, et al)

Impact of COVID-19

- Little data available yet since the pandemic began
- CDC national survey data (June 2020) found:
 - 40.9% of respondents reported at least one adverse behavioral health condition
 - 13.3% started or increased substance use to cope with pandemic-related stress or emotions
 - 10.7% contemplated suicide in the last 30 days
- Follow-up survey (February 2021) found increased rates of mental health disorders
- Specific populations have been disproportionately affected

Impact of COVID-19

- Provisional national data shows a 23.3% increase in fatal overdoses from January to October 2020 (CDC)
 - Fatal overdose rate had increased 6.7% in 2019
- Most states significantly eased access to alcohol, which may impact underage use
 - States with legalized recreational marijuana use also eased access

Impact of COVID-19

- Likely to see significant use increases in future data releases
- The nature of pandemics increase the risk factors associated with substance abuse (Moutier, 2020; Ornell et al, 2020)
 - Isolation
 - Anxiety/Stress/Depression
 - Physical Health
 - At-Risk Populations
- Some risk factors may be weakened however (Gaiha et al, 2020)

Emerging Trends

Alcohol

Alcohol Policy Changes

- COVID-19 has led to multiple policy and operating status changes in the past year across the US
 - Store, bar, restaurant and other alcohol retail locations
 - Changes in the types of alcohol people can purchase
 - Data is rapidly changing

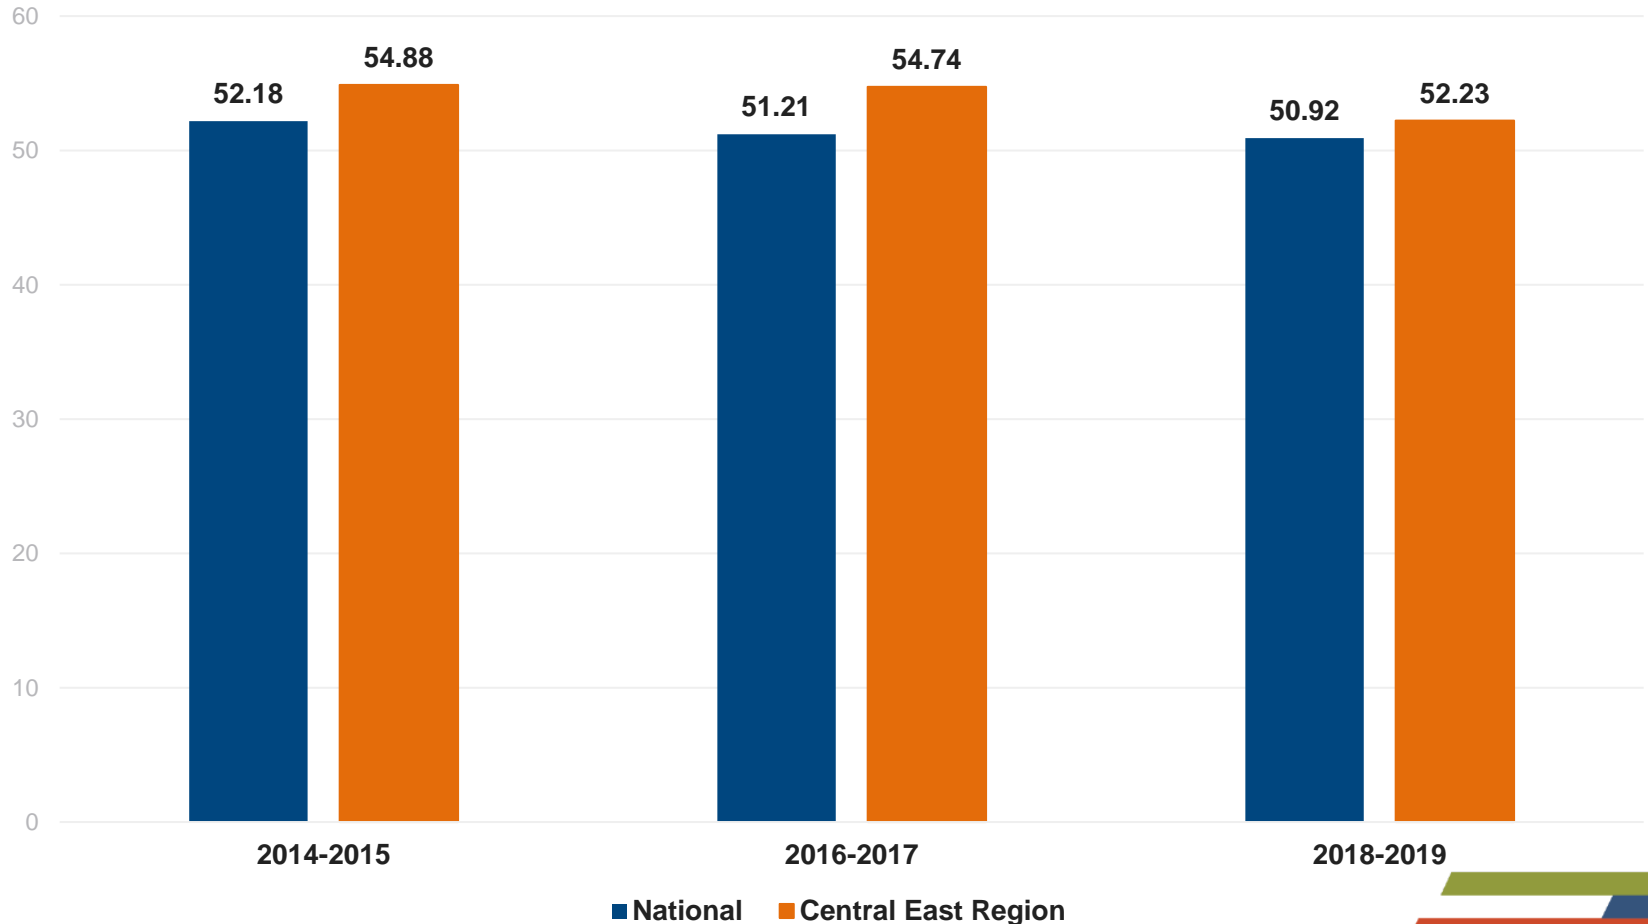

Alcohol Trends

- **Alcohol trends** across the CE Region show that use is **relatively stable**
- Alcohol-induced deaths have been increasing nationally and regionally
- **Underage youth drinking** (ages 12-20) has generally **decreased**
- **Alcohol death use rates** are highest among American Indians/Indigenous peoples nationally, however **in the region is highest amongst those identified as White**

Alcohol Use (NSDUH)

Past Month Alcohol Use Ages 12+ (%)

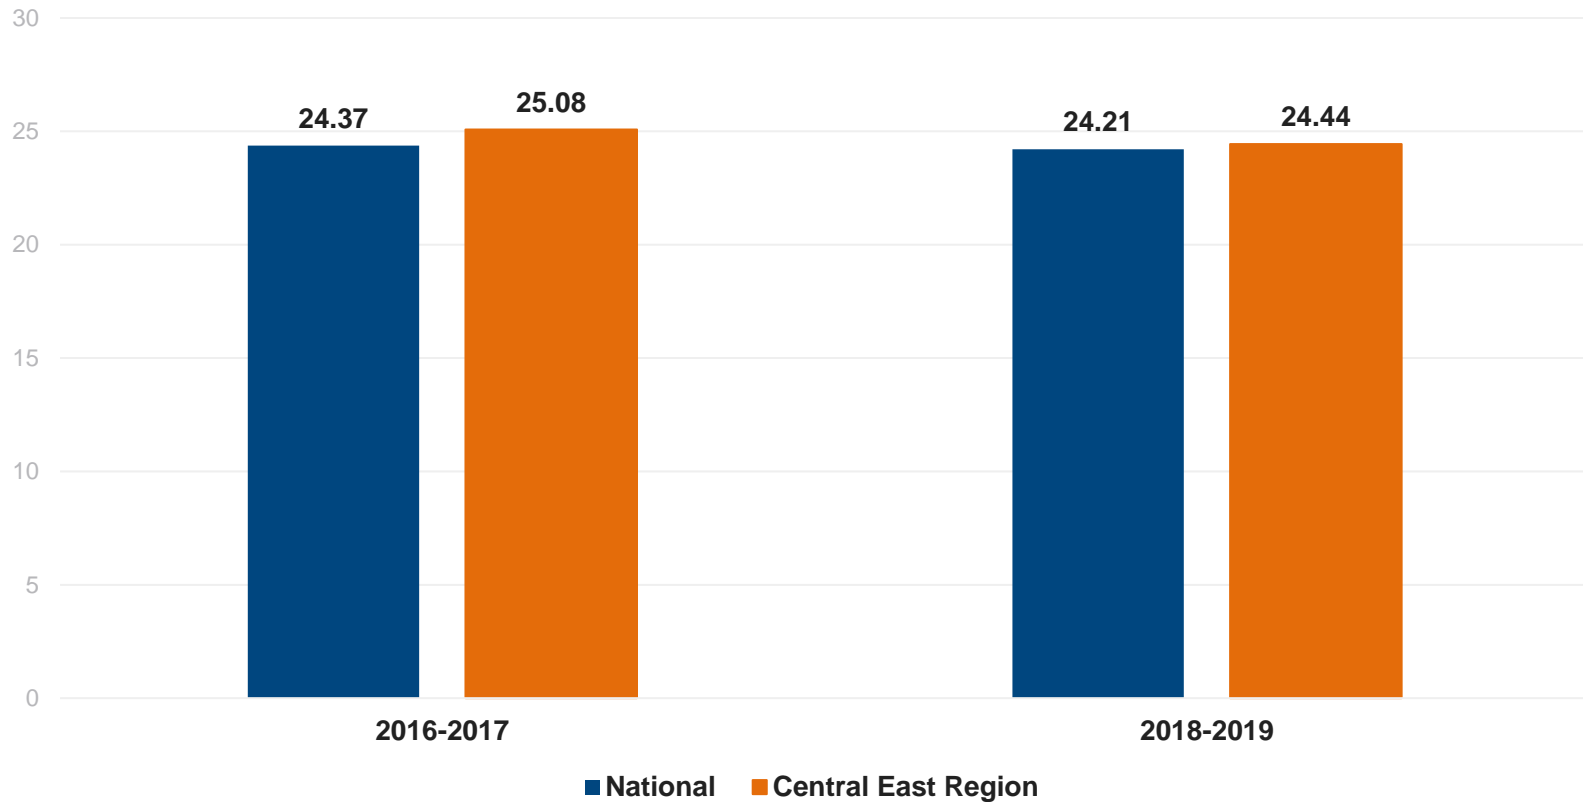

Underage Drinking (NSDUH)

Past Month Alcohol Use Ages 12-20 (%)

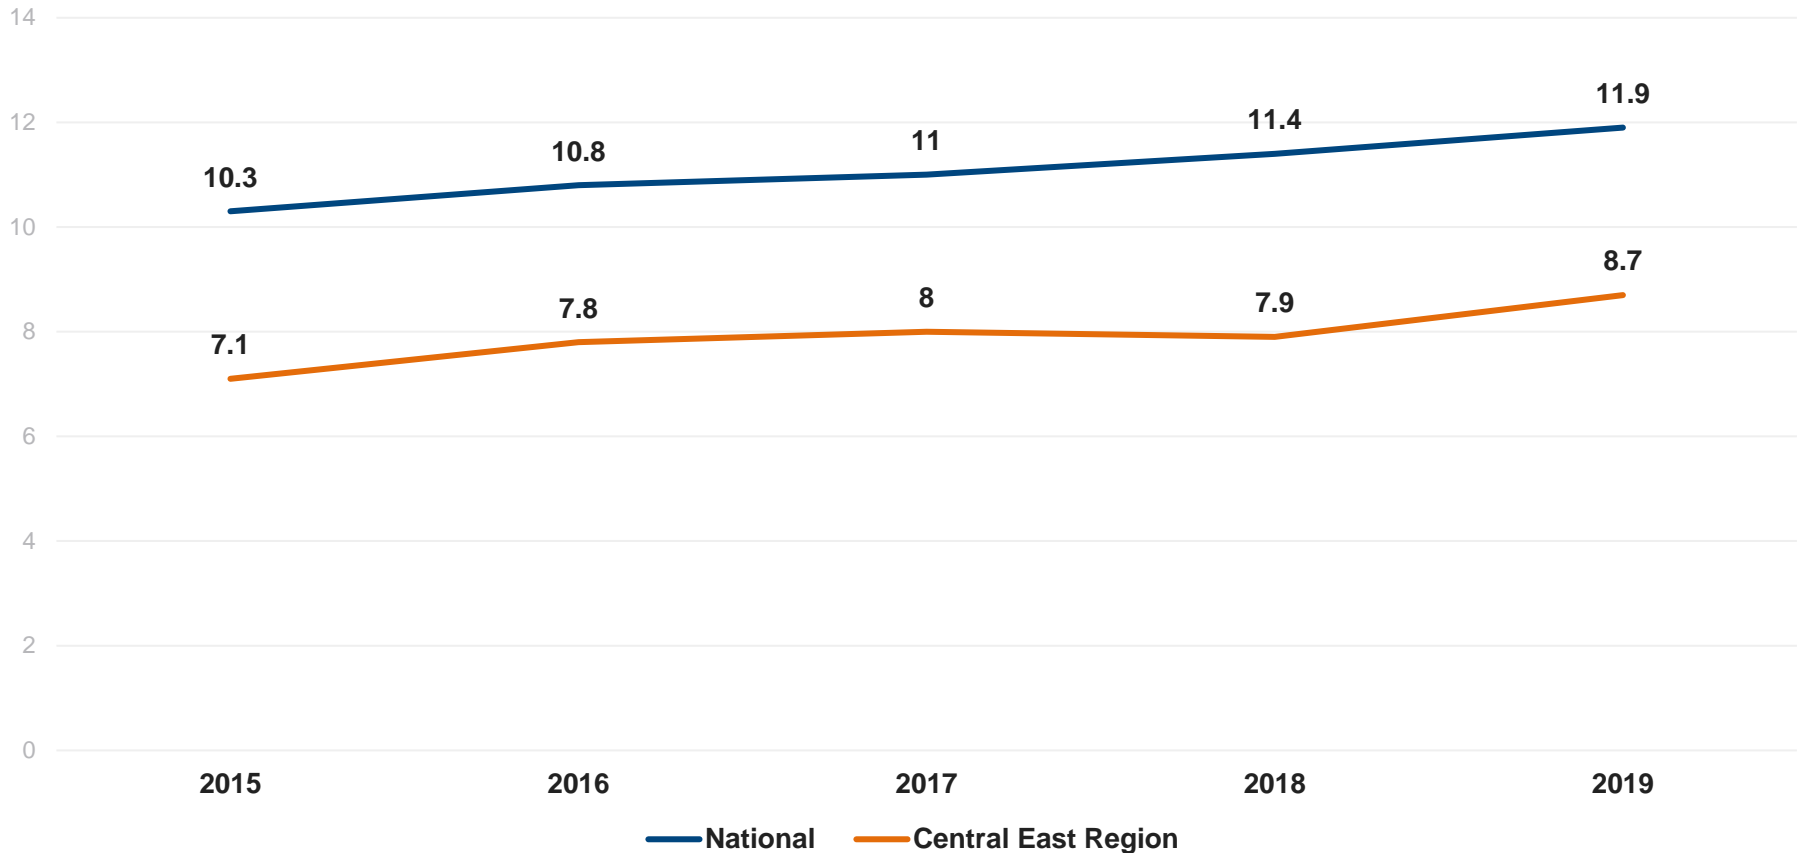

Binge-Drinking (NSDUH)

Past Month Binge Alcohol Use
Ages 12+ (%)

Alcohol-Induced Deaths (CDC)

Alcohol-induced Causes of Death (per 100,000)

Alcohol-Induced Deaths, Contd (CDC)

Alcohol-Induced Causes of Death by Gender (per 100,000)

Emerging Trends

- Prescription Opioids
- Heroin
- Fentanyl

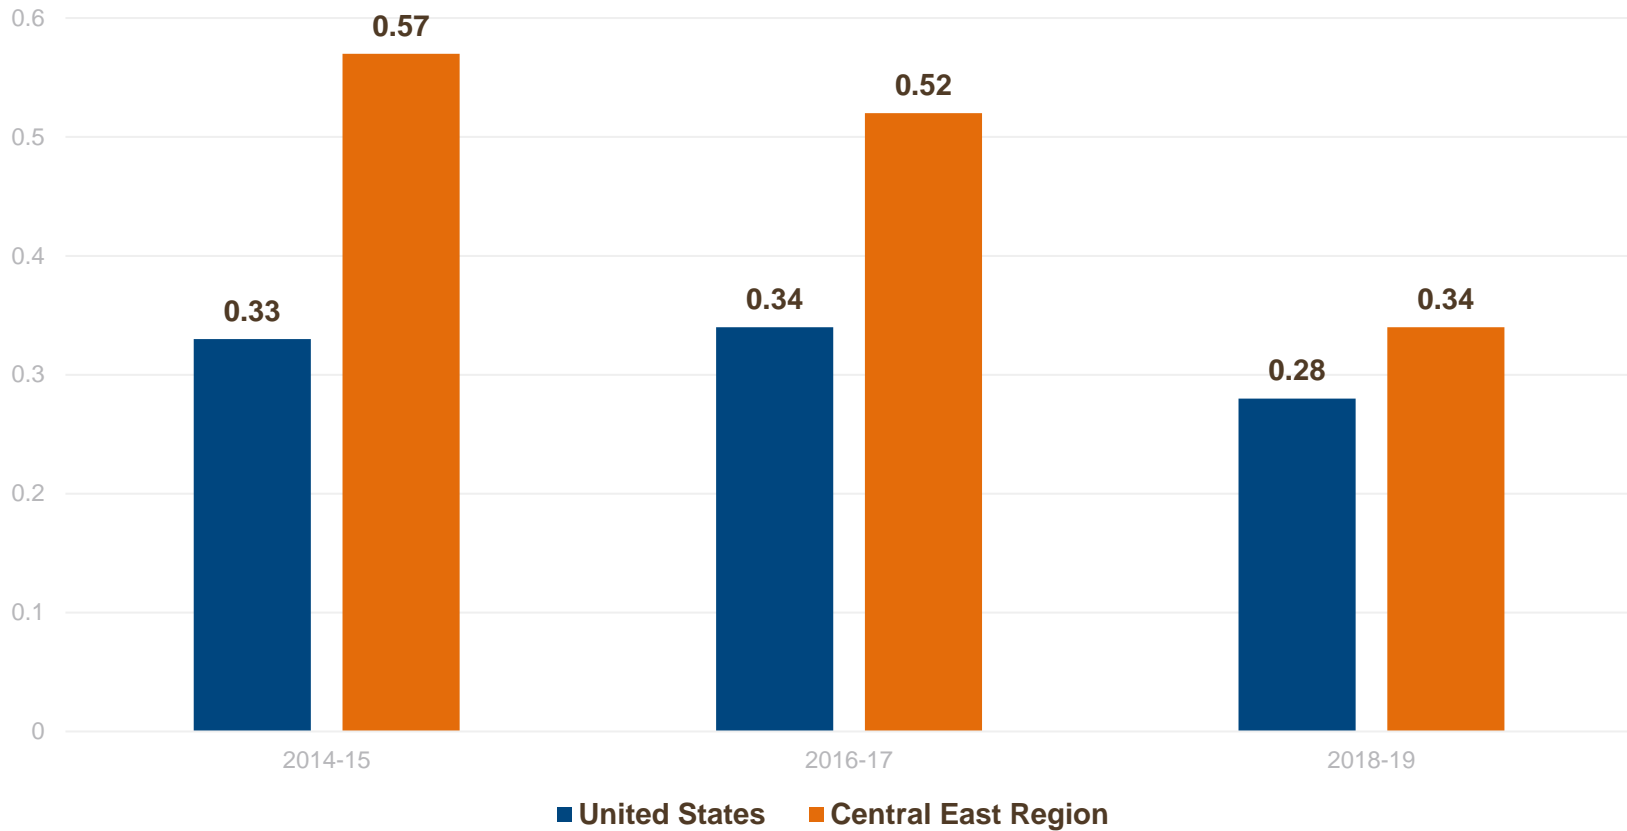

Prescription Opioid Misuse (NSDUH)

Past Year Prescription Opioid Misuse Ages 12+ (%)

Heroin Use (NSDUH)

Past Year Heroin Use Ages 12+ (%)

The Changing Opioid Epidemic

- Prescription opioid misuse has been in overall decline for several years
 - NSDUH redefined "misuse" in 2015, which prevents exact comparisons to earlier years
- Heroin use increased as prescription opioid misuse continued to decline
- But now heroin use is also in decline
- **HOWEVER**, fatal opioid overdoses continue to rise
 - Fentanyl significantly contributes, but opioid overdoses without fentanyl remain high

Causes and Impact of Opioid Changes

- Prescription opioid supply reduction strategies were overall successful at reducing supply
 - But demand remaining high led to substitution effect occurring (RAND)
- Tolerance build-up also responsible (NIDA)
- Need to re-focus strategies
 - Changing from licit to illicit supply reduction
 - Better addressing root causes of demand
 - Fentanyl impact on harm reduction

Opioid Threat Assessment (DEA)

- Fentanyl is readily available across most of the United States
 - Most commonly found in areas with largest heroin supplies
- New York City is one the largest hubs for heroin and fentanyl supplies, impacting nearby states
- COVID may have temporarily disrupted illicit opioid supply chains
- Illegally sourced prescription opioids remain readily available in many areas

Stimulants

- Cocaine
- Methamphetamines

Cocaine Use (NSDUH)

Past Year Cocaine Use Ages 12+ (%)

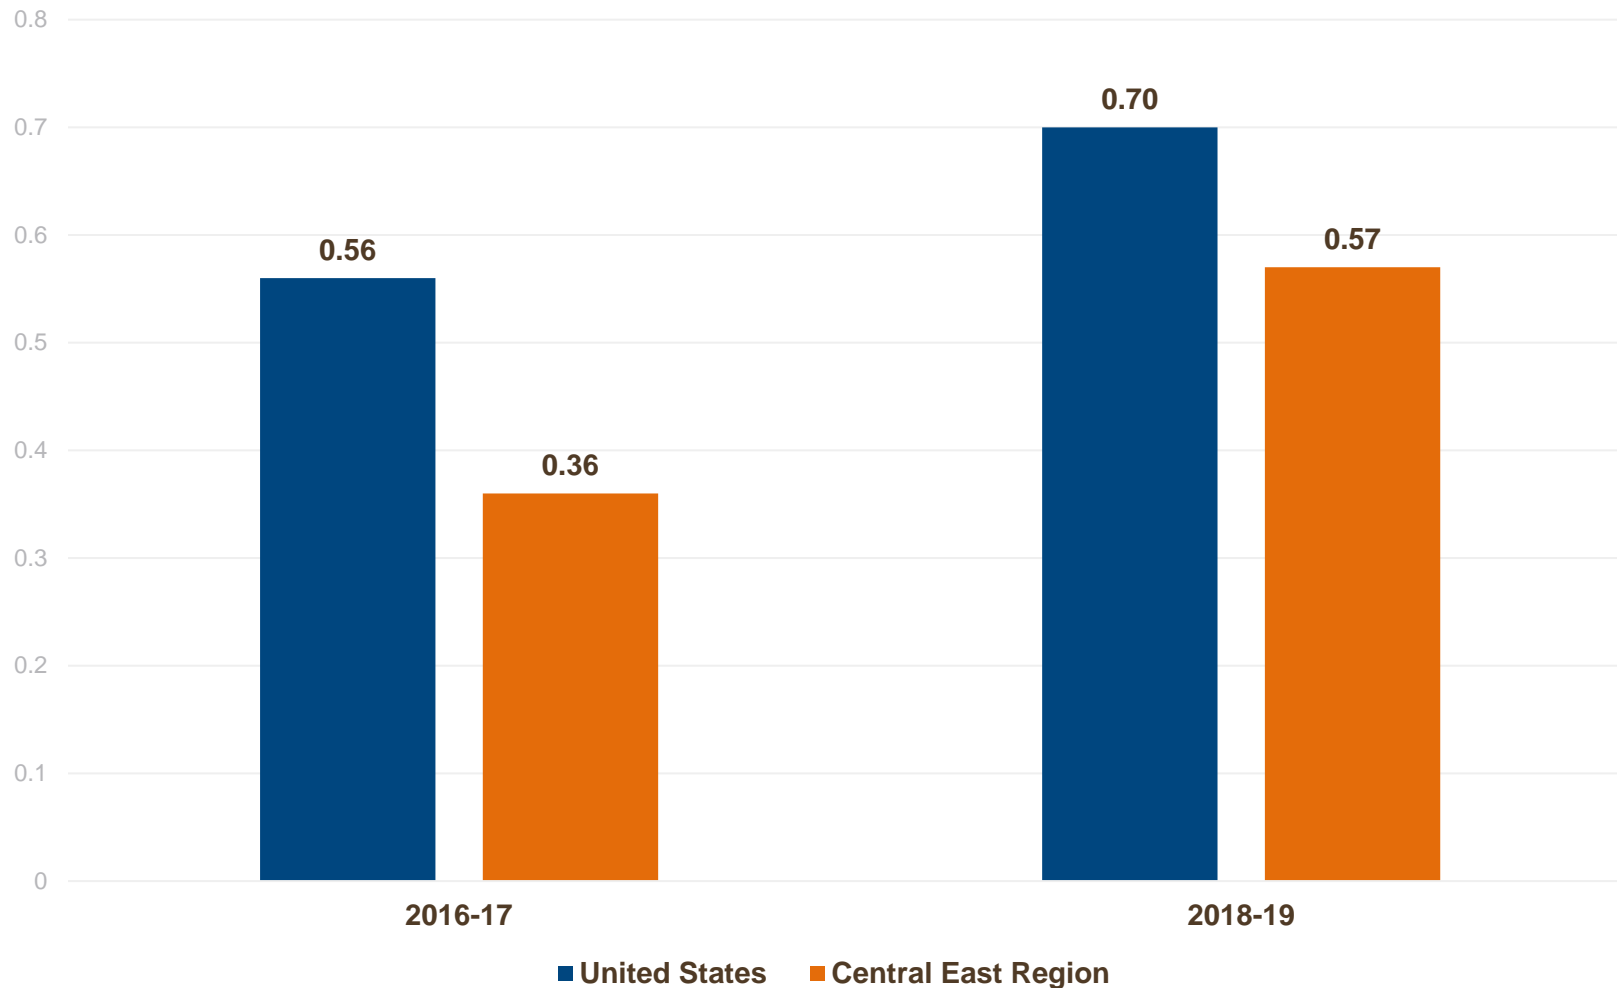

Cocaine Threat Assessment (DEA)

- Cocaine production has steadily increased in Colombia since 2013 and is at record high levels
 - This has resulted in lower prices and higher purity in the US, which may have initially helped increase cocaine use
- Even as use has stabilized, fatal cocaine overdoses have continued to rise
 - Fentanyl! But also, cocaine alone
- COVID did not appear to impact cocaine supply chains in 2020

Methamphetamine Use (NSDUH)

Methamphetamine Threat Assessment (DEA)

- Seizures along with overdose deaths involving methamphetamine continue to rise
 - Overall methamphetamine reports have increased by 75% since 2014
- Most of the methamphetamine available in the US is produced in Mexico and smuggled across the south-west border
- COVID disproportionately impacted the methamphetamine market in 2020
 - Unclear if there were supply chain issues

Consequences

- Fatal Overdoses
 - Easily available data with a lag
 - Can be very difficult to obtain in real time
- Other Drug-Involved Deaths
 - Less certainty in the data
 - Not difficult to test if a substance was *involved* in a death, but can be challenging to determine if a substance *caused* a death
- Other Consequences

Fatal Overdoses Nationwide (CDC)

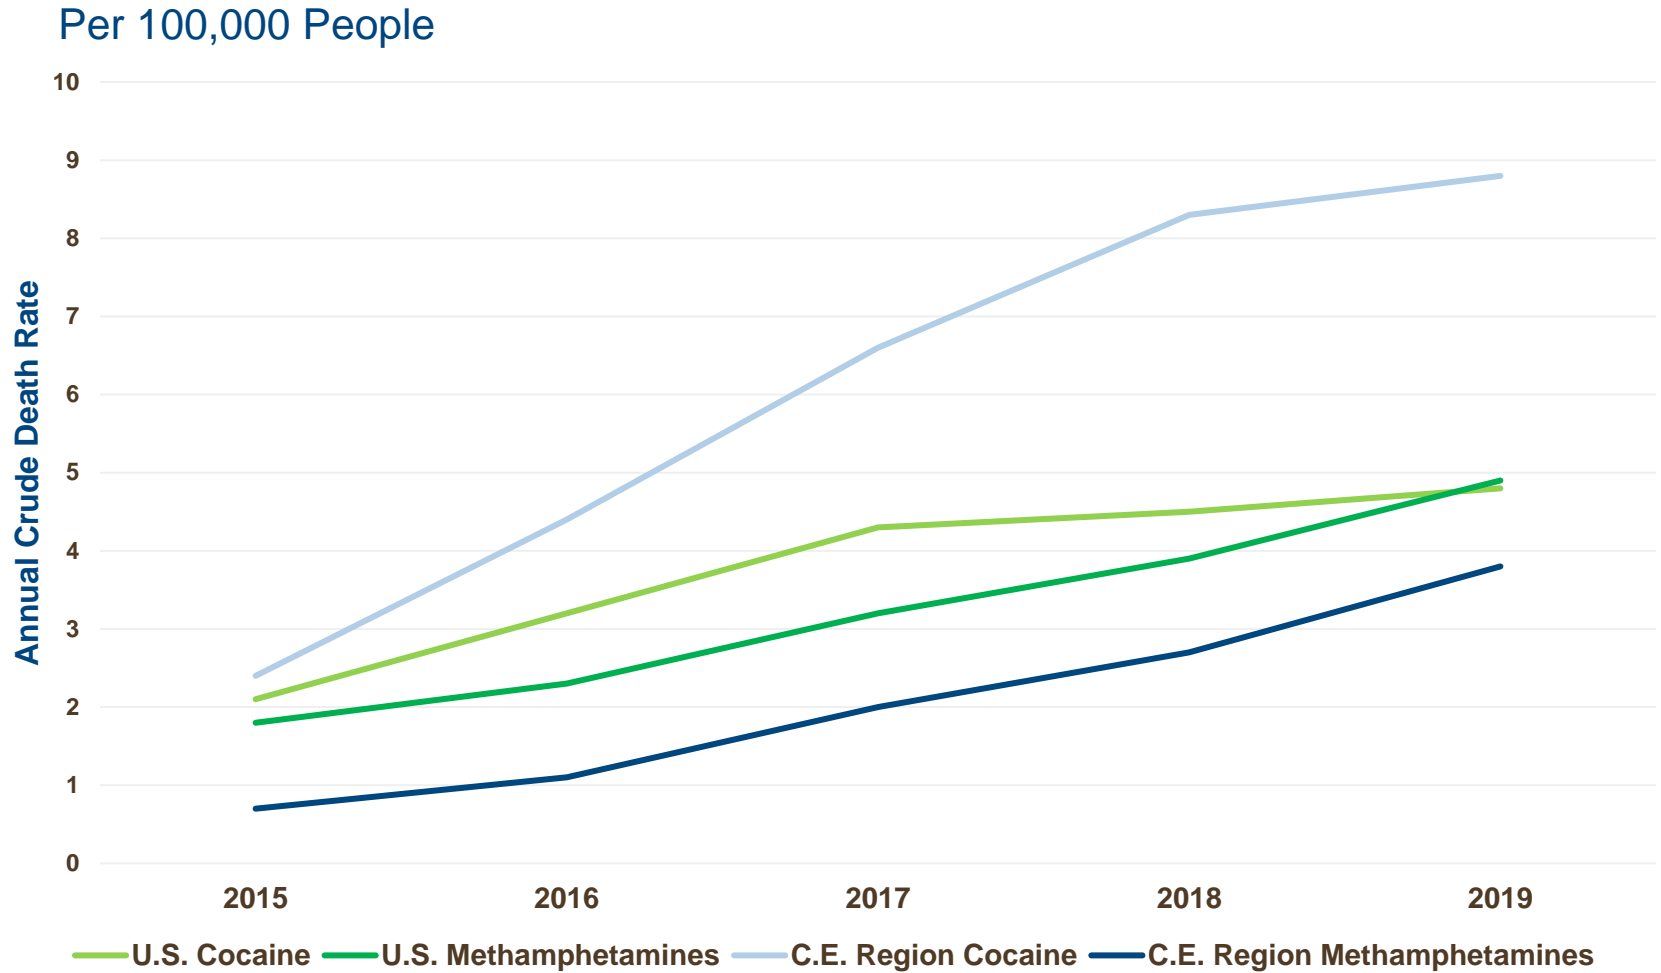

Fatal Overdoses Nationwide Involving Substances Other than Fentanyl (CDC)

Opioid Overdoses Per 100,000 People (CDC)

Cocaine and Methamphetamine Overdoses (CDC)

Emerging Trends

Marijuana, Tobacco, and Vaping

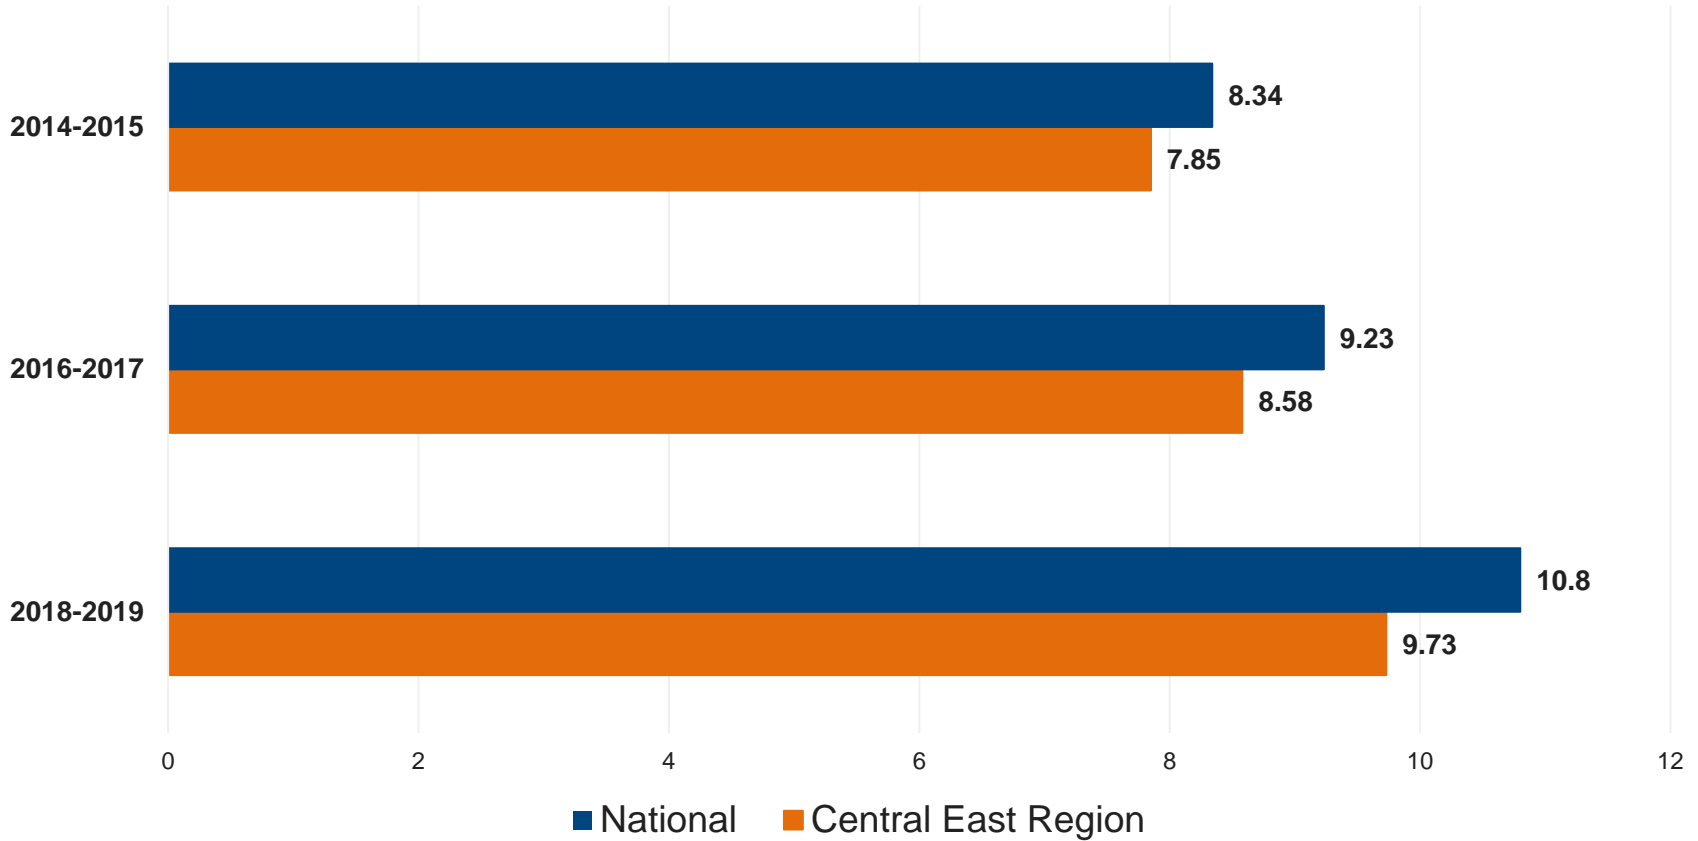

Marijuana Trends

- Regional use is **highest** amongst those aged **18-25 years**
- At least 34% of U.S. residents live in a state that has legalized recreational marijuana use
 - Most in the Center East Region have legalized or decriminalized (D.C., D.E., M.D., V.A.)
- **Legalization only for adults age 21+**, but may further weaken norms against use and **could increase underage access** to marijuana

Past-Month Marijuana Use (NSDUH)

Past Month Marijuana Use, Ages 12+ (%)

Tobacco and Vaping Trends

- In the CE Region, **tobacco and cigarette use** has generally been on the **decline** in all of the states
- Youth vaping data collection for the CE Region has been inconsistent making it difficult to ascertain levels of use
- **COVID-19 may have impacted youth vaping/e-cigarette rates** with data from one study suggesting a reduction in use

Tobacco Products (NSDUH)

Past Month Tobacco Product Use, Ages 12+ (%)

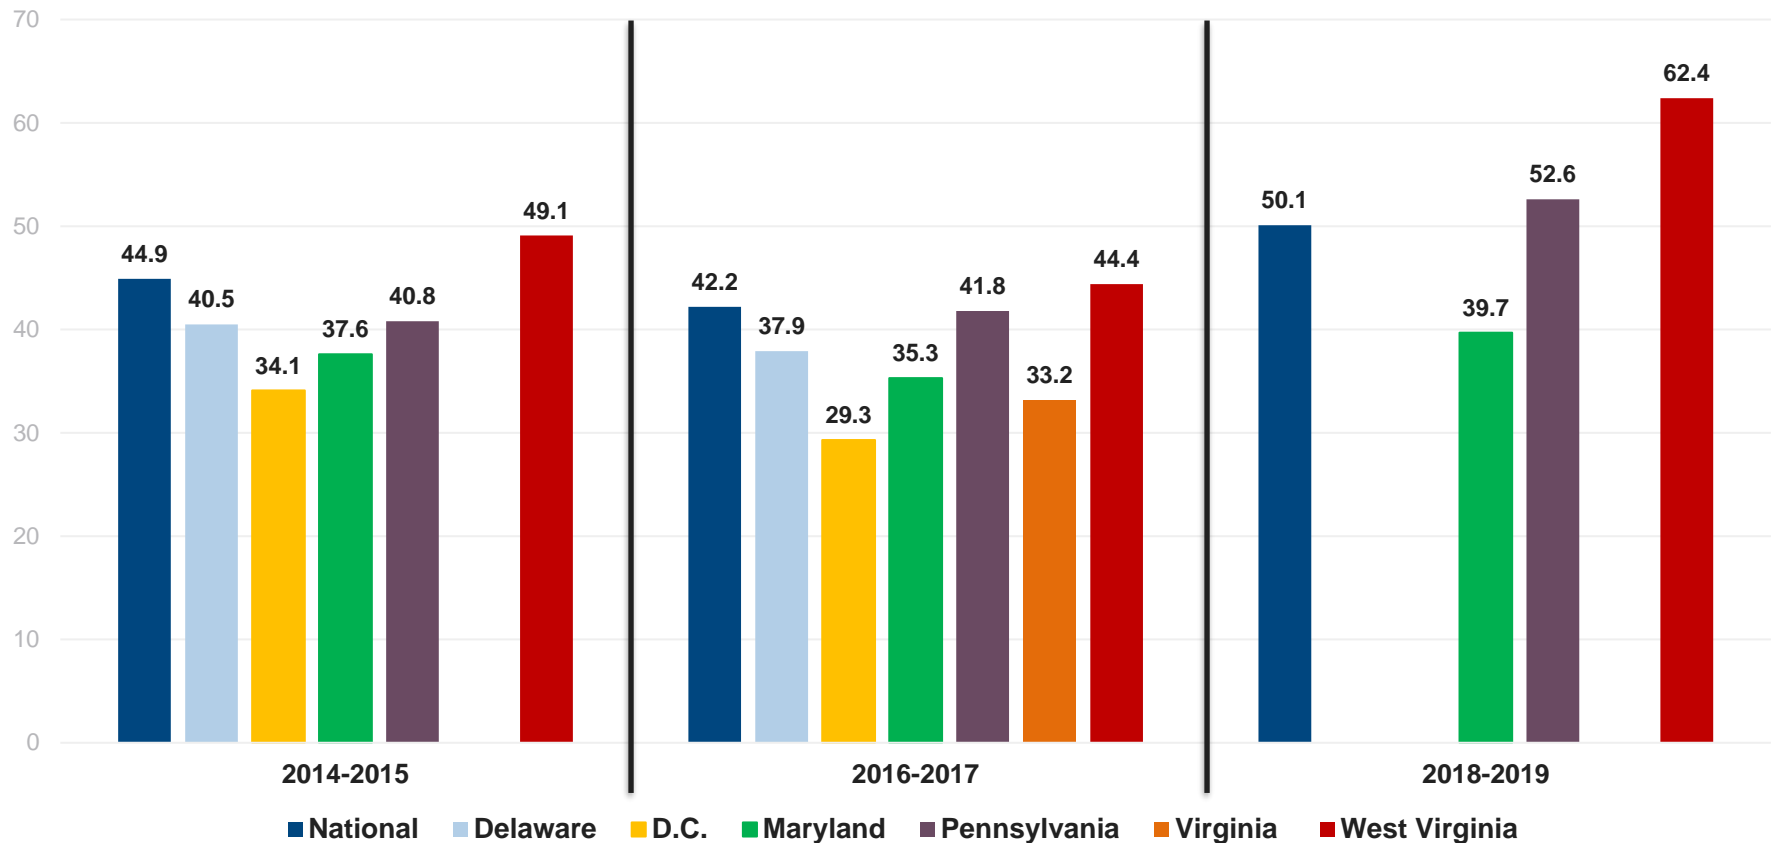

Cigarette Use (NSDUH)

Past Month Cigarette Use, Ages 12+ (%)

Youth Vaping (YRBSS)

Ever Used Electronic Vapor Products, Grades 8-12 (%)

Youth Vaping, Continued (YRBSS)

Currently Using Electronic Vapor Products Grades 8-12 (%)

Emerging Trends

Suicide

Fatal Suicide (CDC)

Suicide and suicide attempts can be an important topic for substance use prevention stakeholders

- Suicide is a **leading cause of death** among people with substance use disorders
- Over **20% of suicides are drug-involved** (not all of which are overdoses)
- Suicide is strongly associated with mental health conditions (e.g. depression, anxiety, stress) that often co-occur with substance use

Fatal Suicides (CDC)

Fatal Suicides, Contd (CDC)

Fatal Suicides by Gender

(per 100,000 People)

What Can Cause Trends to Vary?

- Risk and Protective Factors
 - The Socio-Ecological Model
 - Individuals, Relationships, Community, & Society
- Social Determinants of Health
 - Economic Stability
 - Education Access and Quality
 - Health Care Access and Quality
 - Neighborhood and Built Environment
 - Social and Community Context

The Socio-Ecological Model

The Social Determinants of Health

“Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks” (HHS)

Social Determinants of Health

Social Determinants of Health

 Healthy People 2030

Central East (HHS Region 3)

PTTC

Understanding the SDOH

- The really “big picture” aspects of life
 - Sometimes too big for prevention professionals to address alone; or even at all
- However, prevention can play an important role in an overall public health approach focused on SDOH
- And being involved with other stakeholders we can better support a whole health approach
- And we learn more about the landscape we are working in with our other interventions

Conclusion

- Emerging trend data is a vital aspect of a complete Needs Assessment
- The full impact of COVID-19 on substance use is not yet known
- Pre-COVID, many substances saw declines in overall use, but health consequences increasing for the people using them
 - Stimulant use may be on the rise, as is marijuana use
- Important to understand what drives changes in trends so that we can address them
