Northwest Prevention Technology Transfer Center Presents:

Lessons Learned from Implementing EBPs in a Virtual Environment

July 16, 2020; 11:00 AM – 12:30 PM Pacific

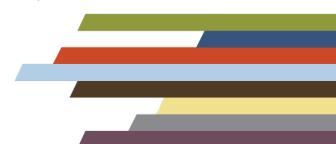

Our Role:

Provide training and technical assistance (TA) in evidence-based practices (EBP) to behavioral health and primary care providers, and school and social service staff whose work has the potential to improve behavioral health outcomes for individuals with or at risk of developing serious mental illness in SAMHSA's Region 10 (Alaska, Idaho, Oregon, and Washington).

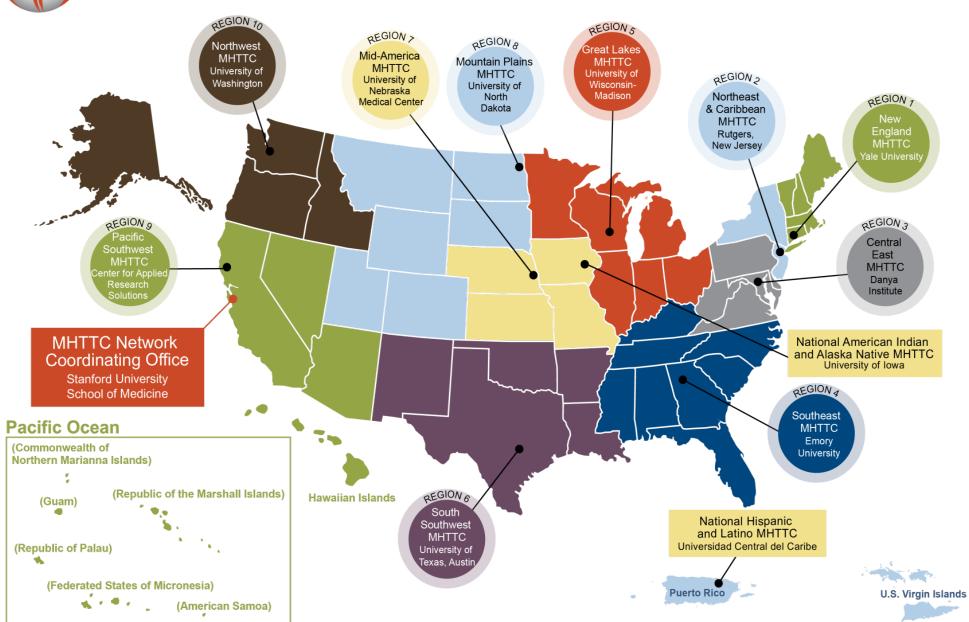

Our Goals:

- Ensure availability and delivery of free, publicly-available training and TA to Region 10 providers.
- Heighten awareness, knowledge, and skills of the workforce addressing the needs of individuals with mental illness.
- Accelerate adoption and implementation of mental health-related EBPs across Region 10.
- Foster alliances among culturally diverse mental health providers, policy makers, family members, and clients.

Presenter

Jessica Dym Bartlett, M.S.W., Ph.D., is Program Director of Early Childhood Research at Child Trends. She conducts evaluation and applied research on interventions to promote the emotional and relational well-being of children and families exposed to trauma and adversity, including child abuse and neglect, child and parent mental health problems, and natural disasters, with a focus on prevention and the promotion of resilience. Dr. Bartlett is Principal Investigator (PI) of a randomized controlled trial (RCT) on the impact of the Newborn Behavioral Observations on maternal mental health and mother-infant relationships at Harvard Medical School, lead evaluator for the Child Trauma Training Center at the University of Massachusetts Medical School, and developer of a toolkit to mitigate childhood trauma in the face of disasters and pandemics. Dr. Bartlett serves on the Steering Committee of SAMHSA's National Child Traumatic Stress Network (NCTSN) and as the Co-Chair of the NCTSN Evaluation Community of Practice.

Learning Objectives

- 1. Learn about Child Trends' resources on supporting the mental health and well-being of children and families during the COVID-19 pandemic
- 2. Understand how these resources can be applied to direct service work and program leadership
- 3. Become familiar with additional Child Trends resources designed to support the well-being of children and families

Resources for Supporting Children's Emotional Well-being during the COVID-19 Pandemic

Resources for Supporting Children's Emotional Well-being during the COVID-19 Pandemic

Authors: Jessica Dym Bartlett, Jessica Griffin, Dana Thomson

Publication Date: March 19, 2020

- Understand that reactions to the pandemic may vary
- Ensure the presence of a sensitive and responsive caregiver
- Social distancing should not mean social isolation

Resources for Supporting Children's Emotional Well-being during the COVID-19 Pandemic

Authors: Jessica Dym Bartlett, Jessica Griffin, Dana Thomson

Publication Date: March 19, 2020

- Provide age-appropriate information
- Create a safe physical and emotional environment by practicing the 3 R's:
 - Reassurance
 - Routines
 - Regulation

Resources for Supporting Children's Emotional Well-being during the COVID-19 Pandemic

Authors: Jessica Dym Bartlett, Jessica Griffin, Dana Thomson

Publication Date: March 19, 2020

- Keep children busy
- Increase children's self-efficacy
- Create opportunities for caregivers (which may mean yourself!) to take care of themselves

Resources for Supporting Children's Emotional Well-being during the COVID-19 Pandemic

Authors: Jessica Dym Bartlett, Jessica Griffin, Dana Thomson

Publication Date: March 19, 2020

Topic: COVID-19

 Seek professional help if children show signs of trauma that do not resolve relatively quickly

Emphasize strengths, hope, and positivity

What resources have you found to be most helpful in your work to support children's mental health during COVID-19?

(please enter your answers in the chat)

Jessica Dym Bartlett and Rebecca Vivrette

Introduction

The COVID-19 pandemic and its associated social and economic stressors can undermine children's development and well-being. Not only must they cope with major changes to everyday life, such as physical distancing and home confinement, but their families may struggle to meet their basic physical and emotional needs. Rates of poverty, unemployment, parental mental health problems and substance abuse, child abuse and neglect, and intimate partner violence tend to rise during disasters. Children may not receive critical supports they need when community services are limited and fewer adults have direct contact with children.

The good news is that over four decades of research on <u>resilience</u> shows that <u>protective factors</u> can buffer children from harm and increase the chances they adapt positively to <u>adversities such as the COVID-19 pandemic</u>. Families and communities can work together to promote these protective factors.

Protective factor #1: Sensitive, responsive caregiving

The primary factor in a child's recovery from an adverse or traumatic event is the presence of a <u>sensitive and caring adult</u>. To support healthy child development during COVID-19, children and youth need to maintain regular age-appropriate connections to important adults in their lives. For example, young children may need more face-to-face time for connection than older children and adolescents, who are able to connect virtually.

Parents and other caregivers can:

- Spend quality time with children. Even short periods of time playing, reading, going outdoors, and talking can bolster children's sense of safety and security during uncertain or scary times.
- Stay connected even when physical separation is necessary for safety reasons. Set up times for children to talk to distant

Definitions

Protective factors: Events, conditions, and characteristics of children, families, and broader environments that increase an individual's chances of healthy development and positive life outcomes despite exposure to significant adversity.

Resilience: The process of positive adaptation to adversity that arises through interactions between children and their environments.

1 Ways to Promote Children's Resilience to the COVID-19 Pandemic

Publication Date: March 30, 2020

Poll

How much do you know about trauma screening?

- a. Not much, this is a relatively new topic to me
- b. A little bit, I have some familiarity with this topic
- c. I know a fair amount about this topic
- d. I consider myself an expert in this topic

Childhood Adversity Screenings are Just One Part of an Effective Policy Response to Childhood Trauma

- Train service providers across child and family service systems in trauma-informed care (TIC)
- Promote adversity screening only as one component of a comprehensive, trauma-informed, strengths-based approach to addressing childhood adversity
- Support research to develop more sensitive tools for assessing adversity exposure in young children

- Increase the availability and accessibility of evidence-based therapies
- Implement preventive strategies that reduce the likelihood of early adversity and its harmful effects on children and promote resilience in development
- Peer-reviewed: Bartlett (2020) in Adversity and Resilience Science Screening for Childhood Adversity: Contemporary Challenges and Recommendations (open access)

- Nearly 60% of schools did not offer ANY mental health treatment services before COVID-19
 - Stratford et al. (2020),
 Journal of School Mental Health (open access)
- Little evidence of what works to address trauma in schools

COVID-19 recovery presents an opportunity to fill critical gaps in knowledge about equipping schools to address trauma

Authors: Emily Fulks, Brandon Stratford

Publication Date: May 21, 2020

Topic: COVID-19

 COVID-19 is also an opportunity to focus on how schools can effectively address trauma and mental health effectively

Strategies to Support the Administration of Direct Service Provision during the COVID-19 Pandemic

Authors: Sara Shaw, Chrishana M. Lloyd, Nichelle Holder

Publication Date: May 11, 2020

Topic: COVID-19

During the COVID-19 pandemic, telehealth can help connect home visiting services to families

Authors: Lauren Supplee, Sarah Shea Crowne

Publication Date: March 26, 2020

Trauma Resources

- Adverse Childhood Experiences are Different than Child Trauma, and It's Critical to Understand Why (Bartlett & Sacks, 2019) https://www.childtrends.org/adverse- childhood-experiences-different-than-child-trauma-critical-tounderstand-why

Impact of Childhood Trauma

Poor academic achievement

Cognition Impaired readiness to learn Difficulty problem-solving Language delays Problems with concentration

Brain development Smaller brain size

- Less efficient processing
- Impaired stress response
- Changes in gene expression

0 Impact of

Physical health

- Sleep disorders
- Eating disorders
- Poor immune system functioning
- Cardiovascular disease
- Shorter life span

Behavior

- Poor self-regulation
- Social withdrawal
- Aggression
- Poor impulse control
- Risk-taking/illegal activity Sexual acting out
- Drug and alcohol misuse
- Adolescent pregnancy

Childhood **Trauma**

Emotions

- Difficulty controlling emotions
- Trouble recognizing emotions
- Limited coping skills
- Increased sensitivity to stress
- Shame and guilt
- Excessive worry,
- hopelessness Feelings of
- helplessness/lack of self-efficacy

Mental health

- Depression
- Anxiety
- Negative self-image/low self-esteem
- Posttraumatic Stress Disorder (PTSD)
- Suicidality

Relationships

- Attachment problems/ disorders
- Poor understanding of social interactions
- Difficulty forming relationships with peers
- Problems in romantic relationships
- Intergenerational cycles of abuse and neglect
